

StockSense AI: Beginner-Friendly Technical Analysis Platform

Problem Statement

Most trading platforms display indicators but do not explain them to beginners. New investors cannot understand why Buy/Sell signals appear or how to interpret RSI, MACD, EMA, Bollinger Bands, VWAP, and SuperTrend.

Project Goal

Build an AI-powered platform that explains every indicator in simple language while displaying it on a live candlestick chart.

User Flow

Search Stock → Open Candlestick Chart → Add Indicator → Display Indicator → AI Explanation → Highlight Buy/Sell Candles → Click Candle for Detailed Analysis.

Example (RSI)

Current RSI:74, Status: Overbought, Meaning: Stock has risen quickly; profit booking may occur. Suggested Action: HOLD. Risk: Medium. Confidence:87%.

Interactive Features

Highlight Buy/Sell signals, explain reasons, show historical accuracy, AI recommendation, confidence score, risk level.

Beginner Mode

Replace technical terms with simple explanations and provide an 'Explain Like I'm New' section.

Overall AI Summary

Combine all indicators into one final BUY/HOLD/SELL recommendation.

Unique Features

Interactive chart annotations, AI teacher, Beginner & Professional modes, click any candle for explanation.

Technology Stack

React.js, Tailwind CSS, TradingView Lightweight Charts, Node.js, Express.js, MongoDB, Yahoo Finance API, OpenAI/Gemini, technicalindicators.

Vision

Create an AI-powered educational stock analysis platform that makes technical analysis understandable for everyone, including complete beginners and non-traders.
